Unrivaled Radar Technology

Spin Rate and Velocity Instantly

Introducing the new Stalker Pro IIs.

Stalker engineers have delivered what the others can't - instantaneous Spin Rate measurement from hand-held sport radar.

One of the most important pitch analytics, Spin Rate, is now provided along with Peak and Across-the-Plate velocity, in a single window.

No delay, no estimation, simple measurements.

Consistent Accuracy and Range

As the unrivaled leader in sport radar, Stalker Sport is the gold standard for consistent accuracy, superior range, and now Spin Rate. The performance and durability of the Stalker Pro IIs comes through in all conditions, pitch after pitch, game after game.

Measuring Ball Spin

Measuring a baseball's spin rate is more challenging than measuring its speed. Speed measurement is nearly instantaneous, whereas measuring ball rotation requires tracking the majority of the ball's flight, followed by a complex calculation determining ball spin.

Occasionally the measurement angle, obstructions (net, fence, batter, etc.) or gun movement can interfere with a perfect view, resulting in a missed reading. A slight shift in position usually clears this up. Consult your owner's manual for other tips and guidelines.

006-0613-00 Rev B

Pro II

Features and specifications:

- Spin rate capture up to 150 feet
- Velocity capture at 500 feet
 - 1-150 MPH speed range
 - Removable, rechargeable high capacity lithium-ion battery handle
 - Constant transmit time of over 5 hours per charge
 - Measures MPH and km/h
- 3 active windows; Peak, Rolldown (across the plate), and Spin Rate (or Exit Velocity)
- Recall previous 10 pitches
- Waterproof to 1 meter of water for up to 30 minutes (IP67)
- Backlit LCD display and keypad

2 1/2 digit and 3 1/2 digit LED Speed Signs shown with wireless module.
Part #200-1328-00
